

## Drum Terminology

### Open Head Drum

### Tight Head Drum

# Lids, Rings, Gaskets, & Fittings

**Plain Top Lid:**  
A common lid for Open Head Drums.

**Lid with Fittings:**  
The standard lid for Tight Head Drums, and an alternative lid for Open Head Drums. 2" & 3/4" Fittings located on each end of the lid for Poly or Steel Bungs.

**Rubber Gasket:**  
Placed under the lip of the Drum Lid, or around the rim of the drum itself. Used as a protective sealant when closing the drum.

**Bolt-Ring:**  
A common Closure Style for Steel Drums. Locks the lid to the drum by the Ring, Bolt, and Nut. Tightening the Bolt & Nut completes the closure.

**Lever-Lock Ring:**  
A common Closure Style for Poly Drums. Locks the lid to the drum by tightening the lever into a locking position. Once tightened around the lid, the closure is complete.

**Bungs:**  
2" and 3/4" Bungs are used for Drum Lids with Fittings. The most common sizes are 2" & 3/4". They come in Poly or Steel material, and in a variety of styles including vented.
